# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, Form 86ab, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, the total strength of the reporting units as shown herein has been consistently about one percent below the actual strength of the Army in the Continental United States.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

### MORBIDITY DATA

Admissions are reported only for cases hospitalized or confined to quarters and excused from duty for 24 hours or longer, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all traumatisms other than battle casualties (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, and reactions to medications as well as various types of wounds not due to enemy action). Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. This ratio may not be significant when the strength of a Command is changing markedly or when a Command has a relatively large number of General Hospitals.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on Forms 86ab is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 25 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table.

### HOSPITALIZATION DATA

Current hospitalization conditions are presented in terms of total beds authorized and total beds occupied.

Unless otherwise specified, beds authorized as shown in this report are defined in par. 36h of AR 40-1080, C 2. Total beds include expansion beds in addition to normal beds. Beds in dispensaries, convalescent facilities, venereal disease facilities, and college or university training units are not included in the tabulations for individual stations.

Regional Hospitals are distinguished from Station Hospitals by the letters (RH) appearing after the name of the station.

In the case of General Hospitals there are shown, in addition, the number of Army patients admitted, the number disposed of during the week (by return to duty, transfer, death, CDD, or otherwise), and the number of such patients remaining in hospital (including convalescent facilities, if any) at the end of the week, subdivided by disease, injury, and battle casualty patients. The patient days of treatment are presented separately for hospital and for convalescent facilities. The bed capacity and beds occupied in convalescent facilities are also indicated.

### EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

# WEEKLY HEALTH REPORT

FOR THE WEEK ENDING 28 JULY 1944

## COMMENT ON CURRENT TRENDS

### CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

#### All Causes: Disease and Injury:

During the week ending 28 July 1944, the admission rate from all causes decreased to 537 per year per thousand strength. This is about 4 percent lower than the previous week and only about 1 percent above the minimum rate for the year recorded during the weeks ending 30 June and 7 July.

The admission rate for all diseases combined for the current week was 467 per thousand strength or about 30 percent lower than for the corresponding week of 1943. Current morbidity from disease is about 20 percent below the lowest rate experienced during 1943.

Morbidity from injury again decreased, being reported at a rate of 70 per thousand or the lowest since the week ending 9 June 1944. The current week's admission rate from injury is about the same as the rate for the year to date.

#### Respiratory Causes:

Morbidity from colds, influenza, etc. decreased slightly to a rate of 65 per thousand to continue the steady downward trend of the previous 22 weeks. Current morbidity from these causes is about 35 percent under that for the corresponding week of 1943. Since the beginning of June the admission rates from colds, influenza, etc. have been under the lowest rate experienced in 1943 (during September).

The admission rate from pneumonia decreased slightly to 5 per thousand which is the lowest rate registered so far this year and only about half the rate for the corresponding week of 1943.

### Common Communicable Diseases:

Morbidity from venereal disease (excluding cases contracted prior to entry into active service) increased sharply to a rate of 39 per thousand, by far the highest reported since early in 1942. Current morbidity from these causes is more than 20 percent higher than during the corresponding week of 1943.

The admission rate for diarrhea and dysentery remained at 13 per thousand and was less than one-half as high as the rate for the corresponding week of 1943.

The numbers of new cases of measles, mumps, and scarlet fever continued at the relatively low seasonal levels expected during this time of the year. The number of new cases of meningitis increased somewhat from the relatively low figure reported the previous week. (The increase reflected chiefly 11 new cases at Camp Hood, Texas.) The number of new cases of rheumatic fever decreased sharply to the lowest number reported since the week ending 24 December 1943. The number of new cases of poliomyelitis reported for the current week was 6, the highest this year.

### VARIATIONS IN MORBIDITY BY SERVICE COMMAND

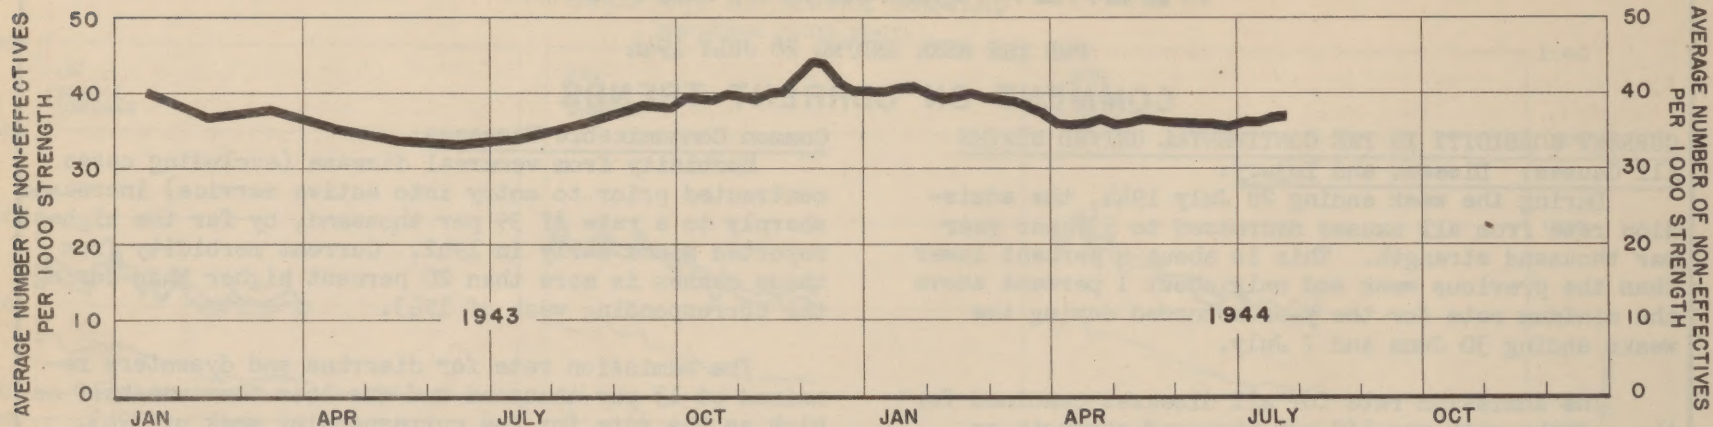

#### All Causes: Disease and Injury:

The admission rate from disease decreased sharply in the Second, Fourth and Ninth Service Commands, while sizeable increases were registered in the Third and Sixth Service Commands. The increase in the Third Service Command was chiefly due to a large number of "old" or "readmitted" venereal cases at Hampton Roads PoE (111 cases) and a large number of "new" venereal cases at Ft. Meade. The increase in the disease admission rate in the Sixth Service Command arose from an outbreak of bacterial food poisoning at Camp McCoy (112 cases)

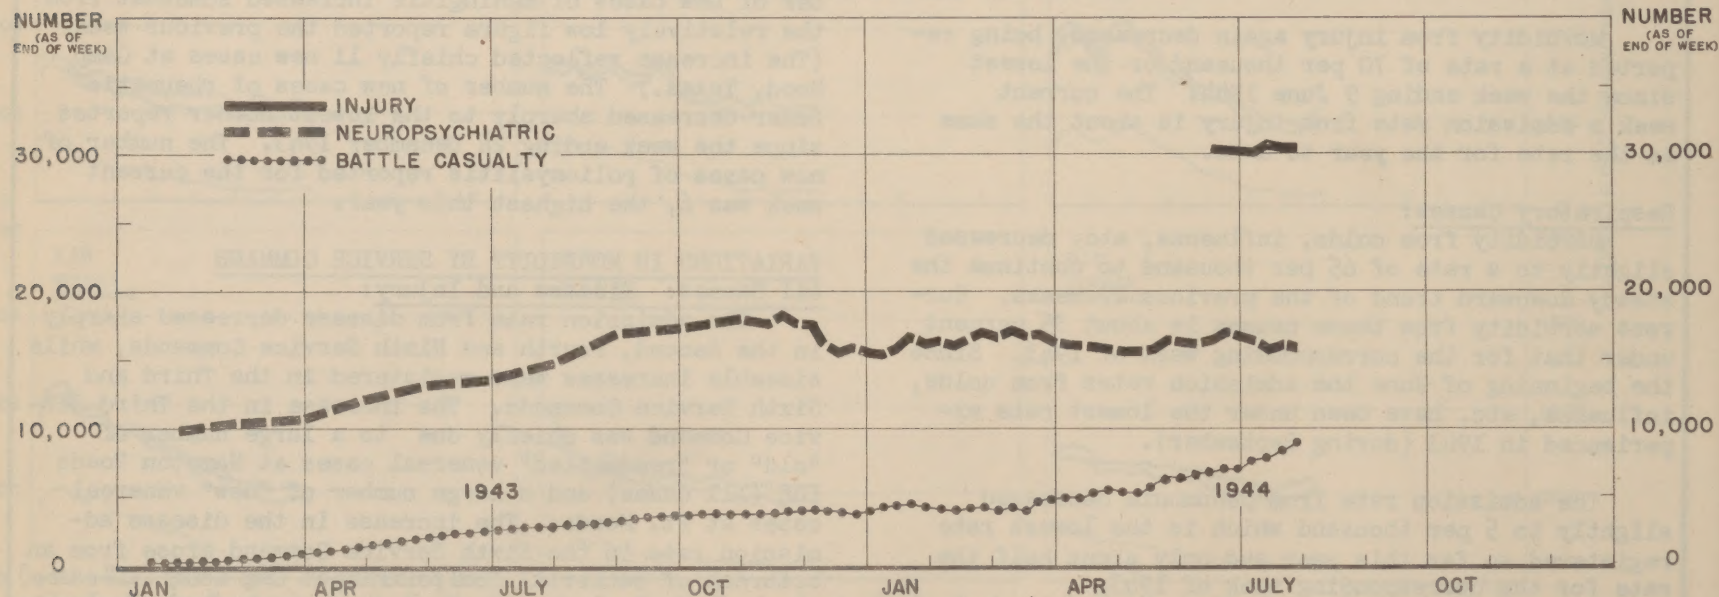

# NON-EFFECTIVE RATE

CONTINENTAL UNITED STATES

# PATIENTS REMAINING UNDER TREATMENT

CONTINENTAL UNITED STATES

## COMMENT ON CURRENT TRENDS (CONT'D)

The highest morbidity from disease was reported by the Third Service Command with a rate of 520 per thousand, while the lowest rate was registered in the Seventh Service Command (440 per thousand).

Sharp decreases in the admission rate from injury were reported by the Fourth and Ninth Service Commands. Significant increases in morbidity from injury were registered in the Military District of Washington and the Eighth Service Command; as a result the highest morbidity rate from this cause was in the Eighth Service Command (86 per thousand).

Respiratory Causes:

In general, most Service Commands reported about the same admission rate from colds, influenza, etc. during the current week as during the previous one. Only the Second Service Command reported an admission rate from these causes in excess of 70 per thousand; the other Service Commands experienced rates close to the average for the United States as a whole.

For the third consecutive week the Sixth Service Command registered a decrease in morbidity from pneumonia, so that for the first time this year it did not show the highest morbidity from this cause. No Service Command reported notably high morbidity from pneumonia.

Common Communicable Diseases:

Morbidity due to "new" cases of venereal disease (other than those acquired prior to entry into active duty) increased sharply in the Third Service Command; this reflected a large number of admissions at Ft. Meade, as mentioned previously. Significant increases in morbidity from this cause also occurred in the Ninth and Fifth Service Commands. The Third Service Command however reported the highest morbidity from venereal diseases, excluding EPTS cases, being closely followed by the Fifth Service Command.

During the current week 253 cases of what was apparently bacterial food poisoning were reported by Camp Stoneman, Calif. These patients had been admitted the previous week (and thus had already been once reported as disease admissions) but the diagnosis of bacterial food poisoning was made only during the current week. This accounts for the sharply increased admissions at Camp Stoneman during the previous week, as mentioned in last week's Health Report.

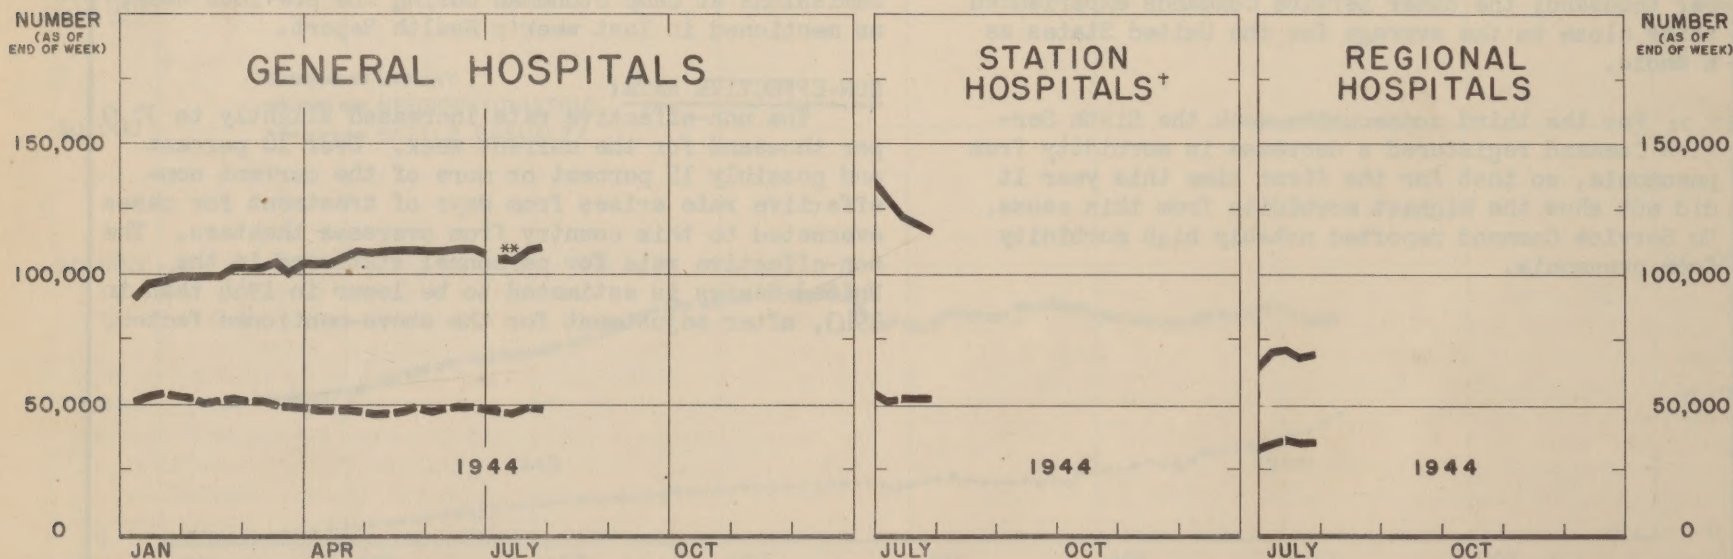

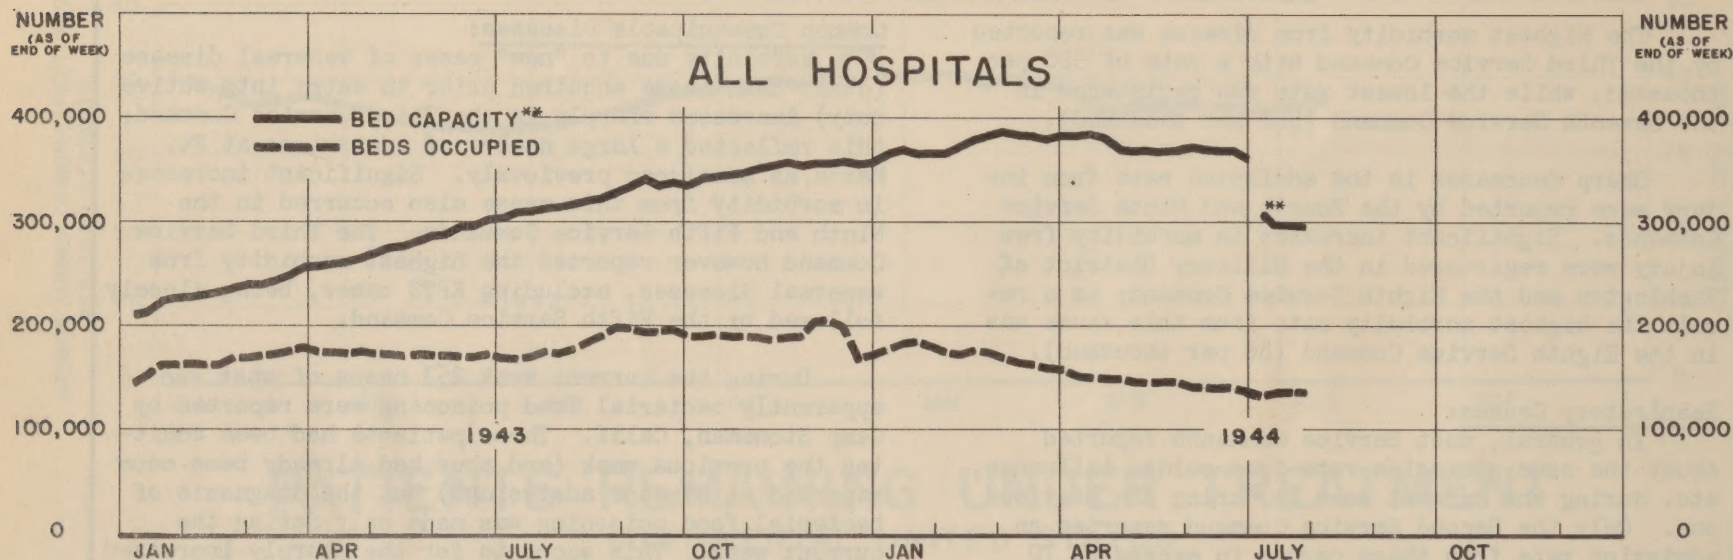

NON-EFFECTIVE RATE:

The non-effective rate increased slightly to 37.0 per thousand for the current week. Over 10 percent and possibly 15 percent or more of the current non-effective rate arises from days of treatment for cases evacuated to this country from overseas theaters. The non-effective rate for personnel stationed in the United States is estimated to be lower in 1944 than in 1943, after adjustment for the above-mentioned factor.

## COMMENT ON CURRENT TRENDS (CONT'D)

PATIENTS REMAINING UNDER TREATMENT:

The total number of Army patients remaining in hospital at end of week represented a rate of 36.4 per thousand strength, the same as for the previous week. The number of neuropsychiatric cases remaining as of 28 July 1944 was reported at 15,812 or about 200 less than the previous week.

The number of non-battle injury patients remaining under treatment in hospital and quarters as of 28 July 1944 totaled about 30,300. The number of battle casualty patients remaining increased to 8,926; all but 294 of these were in General Hospitals.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ending 28 July 1944 the total number of enlisted men discharged by CDD was 3,146 or about 250 more than the previous week. More than one-half of these discharges were reported by General Hospitals.

CURRENT HOSPITAL CONDITIONS:

The total authorized beds as of 28 July 1944 numbered about 295,000, or about 1,000 less than at the end of the previous week. The total number of beds occupied was 135,000 (or 46 percent of the total beds authorized) which was about 1,000 less than at the end of the previous week. Included in the total authorized beds were 258 T/O hospital beds and tentage, none of which were occupied.

The total authorized beds in General Hospitals numbered 110,000 or about 1,000 more than at the end of the previous week; this increase was the result of larger authorizations at England General Hospital (due to redesignation of about 700 convalescent facilities beds as hospital beds) and at Mason General Hospital, which more than offset a decrease of about 1,100 beds at Walter Reed General Hospital (resulting from redesignation of certain

hospital beds as convalescent facilities beds). The total number of beds occupied in General Hospitals was about 48,000 (or about 44 percent of the authorized beds) which was about 1,000 less than at the end of the previous week; the change at Walter Reed G.H., mentioned previously, was partly responsible for this decrease.

Station hospitals (as distinct from Regional Hospitals) reported 116,000 total authorized beds, while Regional Hospitals reported about 69,000 beds. The number of beds occupied at station hospitals was about 52,000 or 45 percent of total authorized beds. The beds occupied at Regional Hospitals numbered 35,000 or 51 percent of total authorized beds. Three stations (De Ridder AAB, La., Santa Ana AAB, Calif. and Sedalia AAF, Mo.) reported more beds occupied than authorized beds. Included among the station hospitals are six which are designated as Convalescent Hospitals (ZI); these reported 3,031 authorized beds (1,556 occupied) and in addition 8,400 beds in convalescent facilities (973 occupied).

The bed capacity of convalescent facilities in General Hospitals was 17,985 - an increase of about 350 principally due to the changes at England G.H. and Walter Reed G.H. discussed above. The total beds occupied in such convalescent facilities was 6,207 or 35 percent of the total bed capacity.

The occupants of the 48,046 hospital beds at General Hospitals (excluding beds at convalescent facilities) were as follows: Army (excluding AAF and WAC)- 37,714, AAF-6,864, WAC-479, other U.S. armed forces- 159, allied and neutral armed forces- 49, prisoners of war- 1,272 and civilians- 1,509.

As of 28 July total hospital beds occupied by civilians numbered 4,740. Hospital beds occupied by prisoners of war (including Italian Service Units) totaled 4,247 (2,872 at prisoners of war camps, 1,272 at General Hospitals, and 103 at other stations).

# SUPPLEMENTARY HEALTH REPORT

FOR THE FIVE WEEK PERIOD ENDING 30 JUNE 1944

## VENEREAL DISEASE ADMISSION RATES

This Supplementary Health Report presents a study of venereal disease admission rates by color for all units in the continental United States reporting on Form 86ab. The data cover the five week period ending 30 June 1944 and are shown for individual stations only where the colored male strength was 1000 or more, with the data for all other units being grouped together within each Service Command.

In considering morbidity from venereal diseases during June, reference should be had to the Supplementary Health Report contained in the Weekly Health Report for the week ending 21 July 1944, in which the June venereal disease admission rates for all Army personnel combined are shown for individual stations. On page 36 of that report there are set forth the numbers of cases remaining under treatment at the end of the month, in each Service Command.

The venereal cases remaining under treatment at the end of June accounted for 2.25 percent of all types of cases under treatment. The days lost due to venereal diseases during the 5 week period ending 30 June 1944 totaled 116,000 or an average of about 23,000 per week, representing a non-effective rate of .81 per thousand. Of the 116,000 days lost due to venereal diseases, about 51,000 days were attributable to colored males. The resulting non-effective rate from venereal diseases for colored males was 4.3 per thousand, while for all other personnel it was only .49 per thousand.

Morbidity from venereal diseases (excluding EPTS cases) for all Army personnel combined was at a rate of 31 per thousand in June or slightly under the rate

of 32 per thousand for May. For colored males, the June rate was 148 per thousand, while for all other Army personnel it was only 21 per thousand, both rates being approximately the same as during May. Thus morbidity of male colored personnel from venereal disease continued to be about 7 times as high as for other Army personnel.

The June admission rate for syphilis (excluding EPTS cases) among colored males was about 12 times as high as for other Army personnel, but for gonorrhea (excluding EPTS cases) the colored male experience was only about 6 times as high. Venereal diseases other than gonorrhea and syphilis were practically all found among the colored males, who accounted for over 85 percent of the total cases, although representing less than 10 percent of the total strength of the Army. The admission rate from such venereal diseases was 14 per thousand for colored males as contrasted with only .2 per thousand for the remainder of the Army.

Morbidity due to venereal EPTS cases (predominately syphilis) for all Army personnel combined was reported in June at 16 per thousand, with corresponding rates of 148 and 4 per thousand for colored males and the remainder of the Army respectively. Variations in the admission rate for venereal EPTS cases reflect entirely the experience among current inductees, so that variations by Service Command or by individual station have little significance. Quite naturally, reception centers report very high rates of admission from venereal EPTS cases, whereas other stations usually show few cases or none at all.

The Second Service Command continued to report by

## SUPPLEMENTARY HEALTH REPORT

FOR THE FIVE WEEK PERIOD ENDING 30 JUNE 1944

### VENEREAL DISEASE ADMISSION RATES (CONT'D)

far the highest morbidity from venereal diseases, excluding EPTS cases, for colored males. The June rate of 193 per thousand in this Service Command although about 40 percent lower than in May was nevertheless almost double the June rate among colored males for the country as a whole. The very high morbidity at Camp Kilmer and Camp Shanks, which have large numbers of task force troops not under the jurisdiction of the Second Service Command, was in large part responsible for the high rate of this Command. The First Service Command showed the next highest morbidity for colored troops with a rate of 171 per thousand, while the Seventh Service Command and the Military District of Washington with rates of about 100 per thousand were the lowest. All other Service Commands reported venereal admission rates for colored troops within 10 percent of the average for the country as a whole.

There was relatively little variation by Service Command in the morbidity from venereal disease, excluding EPTS cases, for the remainder of the Army. The majority of the Service Commands had rates within the range of 17 to 21 per thousand. The Fifth Service Command continued to report a relatively high rate (36 per thousand for June), while the Military District of Washington had, as in previous months, relatively low morbidity (13 per thousand).

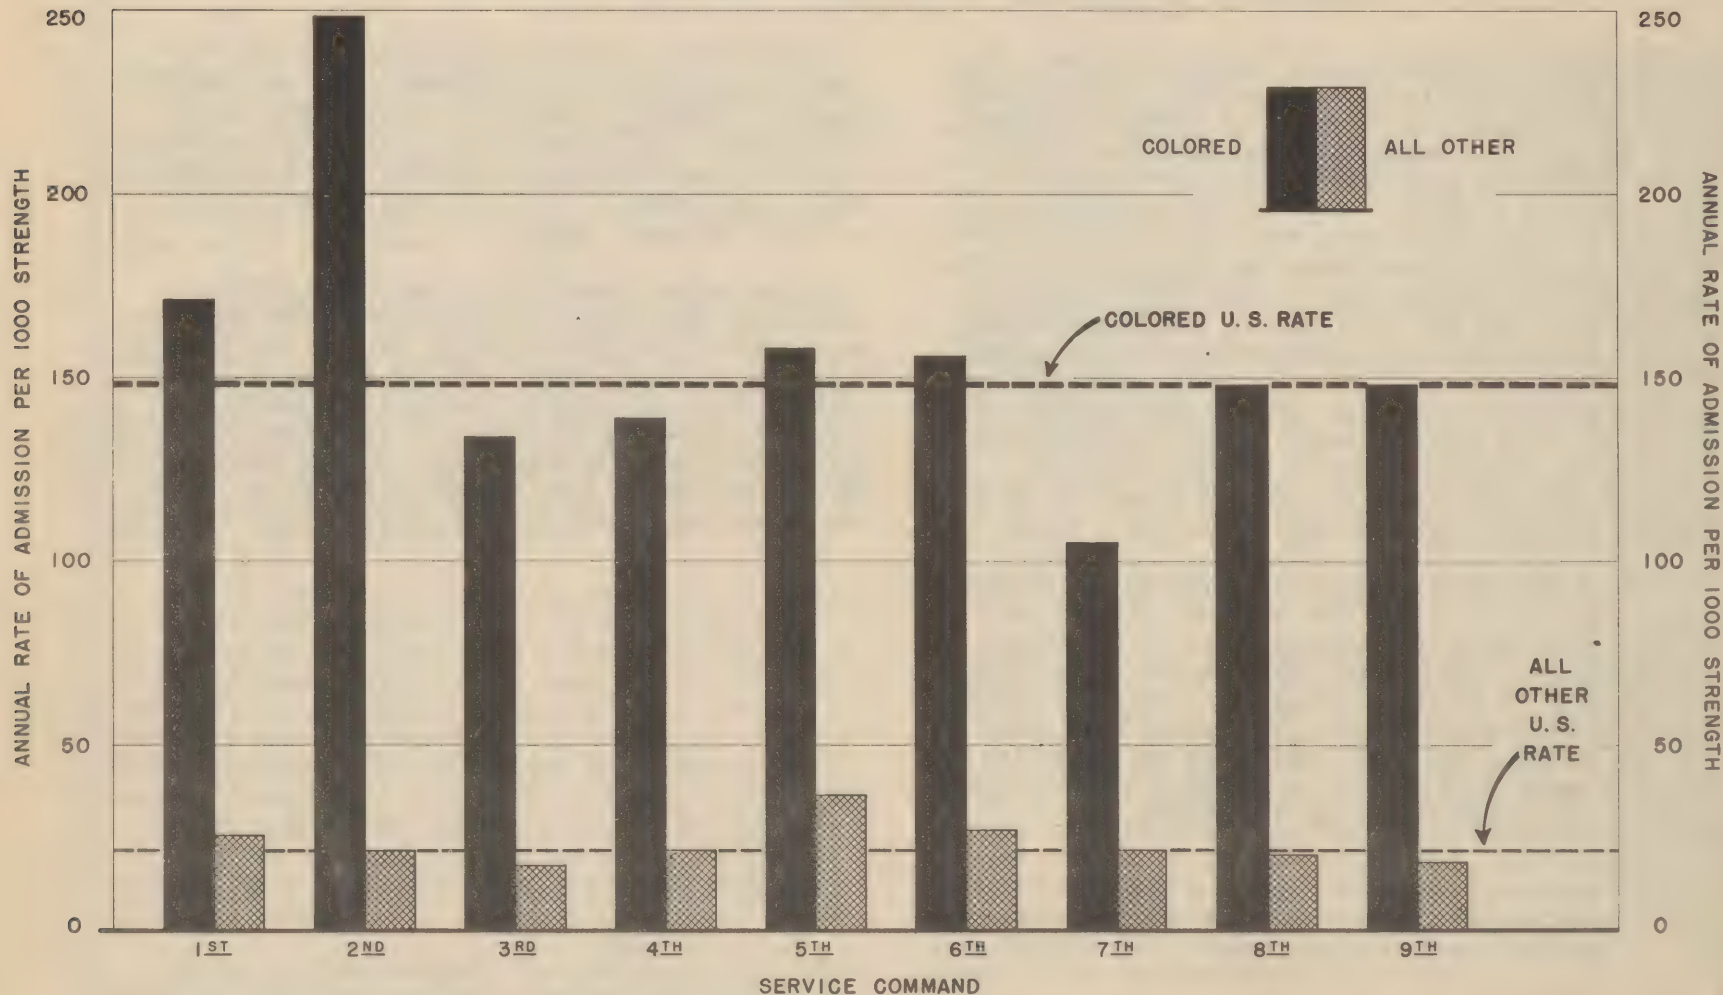

For colored males the following stations reported admission rates in excess of 300 per thousand from all venereal diseases (excluding EPTS cases): Camp Kilmer, N.J., Camp Shanks, N.Y., Hampton Roads PoE, Va., Camp Reynolds, Pa., Camp Gordon Johnston, Fla., Camp Campbell, Ky., Los Angeles PoE, Calif., and Camp Stoneman, Calif.

The highest rates of admission for syphilis (excluding EPTS cases) among colored males were reported from Camp Patrick Henry, Va. (95 per thousand) and Camp Stoneman, Calif. (89 per thousand). The highest rates for colored troops from venereal diseases other than syphilis and gonorrhea, excluding EPTS cases, were reported by Ft. Lawton, Washington (87 per thousand), Camp Kilmer, N.J. (55 per thousand), and Greensboro AAF ORD, N.C. (55 per thousand).
